reportB / Mio Bal

Issued: Nov 12, 2026, 3:34 PM Pacific

Record: FORM-53BD2ECD450F993EE59B4FB6

Personal public verification code: VIEW-1D0EE6618FF85176E000F76F

Include your own public code with every assignment, even in a team folder. Never submit your private recovery key.

SHA-256: 4715fe4a84954fbb86bd25f719c7311bd8cac833d261305430caf1c2f06e7157

Verify the record number at courses.addp2p.com/development-road/independence/index.html?view=verify

An issued record preserves submitted information. It is not a grade or proof of comprehension.

What did you personally execute? Connect completed tasks to files/commits.

I downloaded a 3d model of our character base, then I also downloaded a png of our texture that we would add onto the model. I imported both into blender, it added the texture onto the model but it was messed up and not in the right spots so I manually fixed each part of the character. Then I saved that and added it into Unity, the texture was blurry in there so I fixed that as well.

Record setup/import checks, project opens/runs, player configuration/result, and one failure fix retest. Separate observed results from predictions.

I built the 3d model the player will use and actually play as. I ran into some difficulties but I was able to fix the textures and add it onto my model. I was able to fix certain issues by changing around the texture settings.

Personal GitHub URL/commit, team link if used, project/source paths, PDFs, boards/images, credits and reproduction instructions.

https://github.com/miomio08/12A---Mio

Compare the result with the mission. What did you verify, what remains, and what should the team do next?

We successfully found our 3d models, however, there is still more work to be done because I need to still configure out pokeballs 3d model. That is something that is left, also just added all elements together to create one project. Next, we will figure out how to combine all of the things we worked on individually together into one Unity project.

What we did was to make the flat world for our project named craftmon

reviewedPlan

mission

a story we want to see is a minecraft mod with aspects of pokemon. a playable goal is to be to throw a pokeball at a minecraft mod

framework

my team a I choose P2P for the simple fact it will help us with the use of organized sources and will help us with the game engine setup.

Body Frame owner Isaias 2026-11-11T16:22 to 2026-11-11T16:22 Pacific

Output owner Daniel 2026-11-11T15:45 to 2026-11-11T16:22 Pacific

Result owner Paul 2026-11-11T15:45 to 2026-11-10T16:22 Pacific

Background: Learn the lore from both source materials (Minecraft and Poke mon). Build the world of Minecraft, a free roam where the main character is a combination of Ash and Steve.

Assets: Assets: Getting the elements that will be edited and used in the creation of the mod: - Characters, text, animation, 3d models, fonts, audio, etc. Obtaining everything that will be used in order to achieve the results, aka also the things the audience will view.

CS110 / INDEPENDENCE ROAD

Body Frame: Build/configure: Put the blocky world together, add an Ash-Steve character so he can walk around, and set up the basic controls for throwing Poke balls and catching Poke mon as well of building like in a Minecraft world.

The output is for are mod to allow the player/consumer to be able to throw a poke ball to a Minecraft mob it will also make a custom world when loaded for the player with bits of Poke mon while still looking like Minecraft.

Results: Results - We have achieved the results we wanted. We wanted to make a mod pack for the video game Minecraft where we added a poke-ball from Poke mon.

tech

As a team we have chosen to use unity as the main engine for our game because of our knowledge in C#. We are also going to be using Unity Hub and Package manager. We chose this because based on the lesson videos we saw, we learned a few things about characters and how to create a functioning game, so we have information to get started. Additionally, it is also because we felt that it would be easiest to work with.

Time code

Classes & components

Class | Responsibility | GameObject

pokeballitem | Allows players to throw poke balls | Poke Ball

PokeballProjectille | Handles Poke Ball throwing and collision | Projectile

MobCaptureSystem | Detects and captures Minecraft mobs | Minecraft Mob

PokemonCompanion | Handles captured Poke mon companions | Pokemon Entity

PokemonWorldGenerator | Generates Poke mon-inspired terrain | Minecraft World

Variables / properties

Name : type | Value / purpose | Used by

pokeBallCount : int | Number of Poke Balls the player has | PokeBallItem

captureChance : float | Determines the chance of capturing a mob | MobCaptureSystem

targetMob : Entity | Stores the Minecraft mob being targeted | PokeBallProjectile

isCaptured : boolean | Checks whether a mob has been captured | MobCaptureSystem

pokemonName : String | Stores the captured Poke mon's name | PokemonCompanion

reuse

We can reuse the organization patters we are learning/learned from the 6 videos we saw on game development using Unity and Talsta. We can also reuse the story element to build upon what we have and use the skills we have learned to revise our work. We can also continue to further use AI to keep us on track and add new ideas.

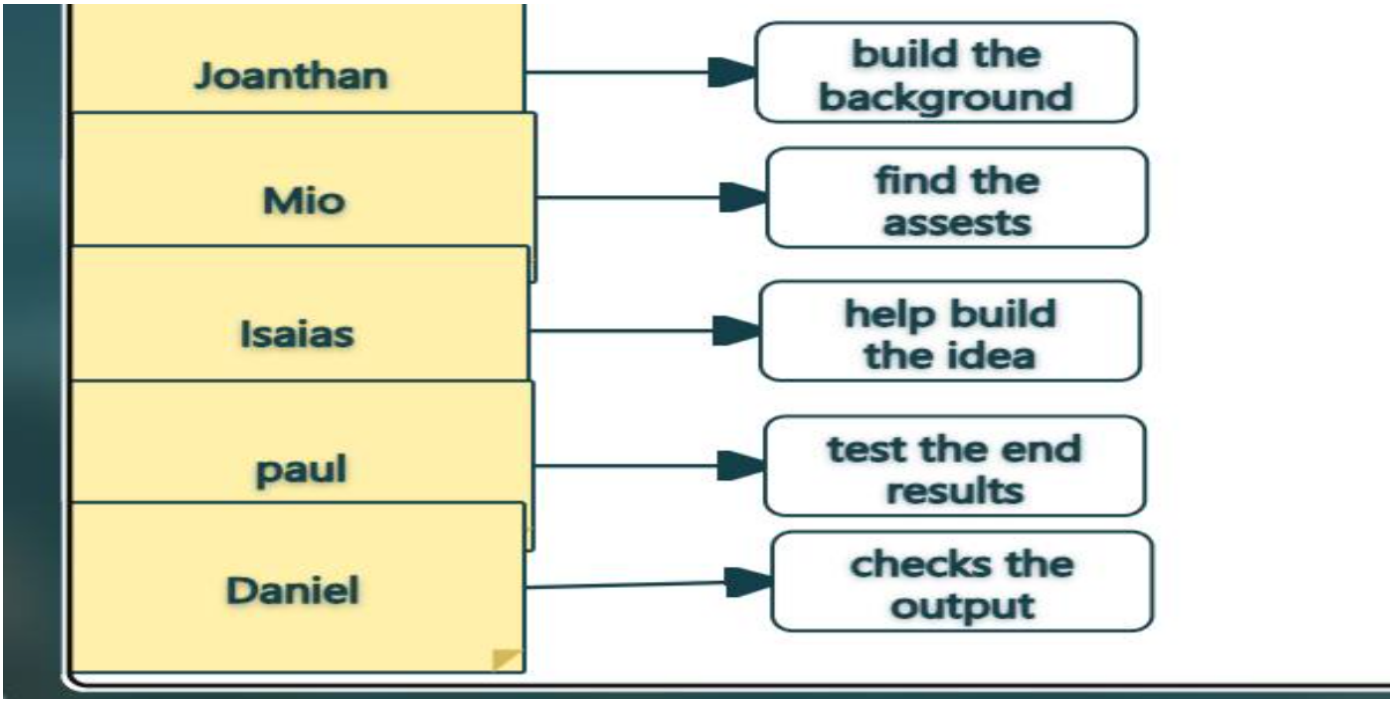

boardNotes

We all had planned to call over Zoom, however, we ran into technical difficulties so we decided to switch to Discord instead. We were on a call for over 2 hours working out our goals and coming up with ideas for our creation. We talked about what elements we want to include in our game, and we also created task boards to help us stay organized. We

gave each other different jobs so we can work on separate things, we also discussed how we will be moving forward from this point on as a team.

Whiteboard

recap

What I understand is that I am responsible for the assets in our project. My job is to find and download the 3d models we will be using. Something I need to clarify is how I will be getting our assets, or from where.
